

PDFproducer v1.2.0001

PDFproducer is a nice little utility which converts plain text into PDF documents. The benefit of this program is that it does not require Acrobat to be installed on the system. It means that it does not use any component of Acrobat to produce PDF files. As it is freeware you don't have to pay anything (but thanks) for producing PDF documents. Produce PDF files without having Acrobat. You can now change the page size also. It offers 90, 180, 260 and 360 degrees of rotation. It also offers a choice of 3 fonts which you can use in your PDF documents. Not to mention 3 types of predefined paper sizes. These all features make PDFproducer a nice little tool for quick PDF production. Have fun creating PDF files!!!
Note: This program requires VB6 runtime files installed on the system.

How to produce PDF files

1. Execute the program.
2. Fill in the necessary details (note all are optional).
3. Browse for the text file which you want to convert.
4. Choose the font, font size and page rotation.
5. Choose the page size from the list or have your own custom page size.
6. Click on "Produce PDF" to generate the PDF files.

Just six easy steps and your PDF file is produced in seconds.

Limitations of the Program

Currently this program can only convert plain text files into PDF files.

No other file format is supported.
